WEEKLY HOME STUDY PACKAGE - WEEK 5 (02/08/21 – 06/08/21)

Subject	Office Technology	Year/Level	11
Strand	Computer concepts and skills		
Sub-strand	11.2.2 Use of internet		
Content Learning Outcome	Explore ways of collecting information and communicating using the internet		

LESSON NOTES/ACTIVITY:

Website and webpage

A Web site typically contains a collection of related information organized and formatted so it can be accessed using a browser. A Web page is based on an HTML source document that is stored as a file on a Web server. The source document contains the text for a Web page interspersed with coding for how to display text and any additional visual or auditory elements.

Web server

A Web server is an Internet-based computer that stores Web site content and accepts requests from browsers. One server can host multiple Web sites, and some Web sites are spread across multiple servers.

Internet Service Provider (ISP)

The most common way to access the Internet is through an Internet service provider (ISP). The providers are already connected to the Internet and provide a path or connection for individuals to access the Internet. The most widely used commercial Internet service providers are national and wireless providers.

National Service Provider

National service providers like FINTEL, Vodafone, KidaNet, Unwired and TFL are the most widely used in Fiji. They provide access through standard telephone or cable connections. Users can access the Internet from almost anywhere within the country for a standard fee without incurring long-distance telephone charges.

Wireless Service Providers

Wireless service providers like Kidanet, Unwired and Vodafone offer Internet connections for computers with wireless modems and a wide array of wireless devices.

Activity 1.5

1. What is the long form for ISP? _____ (1 mark)
2. Differentiate between a website and a webpage. (2 marks)

3. What are internet service providers? (1 mark)

4. List 3 ISPs that use both cable and wireless connections. (3 marks)

5. Define the term web server (1 mark)

THE END.
